

As a licensed radio Amateur, I am concerned that the proposed BPL regulations do not properly affix the responsibility for interference mitigation.

Under your proposal, the bulk of responsibility for interference mitigation falls upon the Radio Amateur. This will make it extremely difficult to deal with large businesses who have little interest in whether or not they are causing interference.

I request that you modify regulations to assure that the responsibility for mitigation of interference issues be that of the Powerline Provider. This will more fairly allow the Radio Amateur the opportunity to eliminate interference to the Amateur Radio Services.
